

## **Post-Science Global Economic Plan by World Brotherhood Union (WBU) and Post-Science Institute(PSI)**

Post-Science discovery of the existence of non-violable laws of nature in social science is in direct conflict with the US economic theories based on the 2013 Economic Nobel Prize. The four theories are:

- (1) Eugene Fama believes in rational and efficient market,
- (2) Robert J. Shiller believes in irrational and inefficient market,
- (3) Lars Peter Hansen works on market comparison method, and
- (4) Non-violable laws of nature in social science ((1) – (3) above are not non-violable).

Items (1), (2), and (3) can be collectively called US Economic Theory. Item (4) is Post-Science Economic Theory. US Economic Theory runs parallel to the recent economic history. Post-Science Economics predicted publicly both the US Saving and Loan Crisis and the recent Subprime Woe, which Shiller also claims to have predicted 5 years before it occurred, but Fama still does not believe in the bubble. Hansen's market comparison method is the main cause of financial crisis because the method keeps the price unchanged and creates a bubble when the economic situation worsens.

The Post-Science Global Economic Plan calls for the collaboration of nations and global companies, which believe in the existence of non-violable laws of nature in social science and fault the US Economic Theory for the on-going global financial crisis.

Based on its solutions of value, which governs human behavior, and complete automation, which characterizes life, the Post-Science Global Economic Plan is summarized below:

1. **The most relevant non-violable law of nature** is the post-science solution of value, whose commercial version is the Infinite Spreadsheet at: <http://123is.com>. The Infinite Spreadsheet is mathematically rigorous and provides full disclosure of inputs, methodology, and all the equations. The full disclosure allows full accountability.
2. **The initial potential participating organizations** will be China, Turkey, Intel, WBU, and PSI.
3. **The initial invited participating individuals** will be Bulent Corak, Michael Condry, Lotfi Zadeh, T. L. Kunii, C. V. Ramamoorthy, Kenneth Arrow, Richard Stallman, Wai H. Tsang, Chien Yi Lee, Rob Lowe, Bob Block, Pius Leung, Patri Friedman, Tyler Cowan, Niall Ferguson, S. B. Woo, George Hsieh, Magdy Hussein, Xinming Zhou, Debra Amiden, Jin Chen, Tony Shen, Graham Partis, Edy Portman, Robert Lyczkpwski, Dimitri Gidaspow, and Hugh Ching.
4. **The Knowledge-Led Society** is recommended and has the order of authority (1) Knowledge, (2) People of knowledge, (3) Individuals, (4) Democratic government, (5) People as a whole.
5. **Total freedom within the limit of freedom** is recommended and is defined by the non-violable laws of nature in science and social science and the design criterion of permanence.
6. **Correct distribution of resources**, which is the main economic problem today, not productivity, will be based on the solution of value. The distribution of employment is particularly important.
7. **Cooperation among Knowledge-Led Societies** will be for the goal of knowledge sharing.
8. **Centers of Valuation and Investment Analyses** will be formed for making rational decisions.
9. **Post-Science Institute and Intel will demonstrate to Turkey** the validity of the solution of value, and Turkey will collaborate with China, whose leader Xi Jinping is in favor of post-science.
10. **Post-Science Projects** will be determined by the Centers of Valuation and Investment Analyses.
